EXPERIENCE

Founding Developer Experience Engineer
2026

General Translation (full-stack localization infrastructure), San Francisco

- Built Ask AI, the dashboard's embedded assistant: it answers from ~400 pages of live product docs through its own retrieval tools and links users to the right page.
- Shipped the outbound growth engine that runs the company's go-to-market: agents find and score leads, then a scout crawls each prospect's live site, catches real localization errors, screenshots them, and writes the outreach email around the evidence.
- Built autodemo, a pipeline that turns a docs page into a finished demo video in any language: it writes the scene script, scaffolds a real working app, drives a real browser and code editor, records the run, and cuts the video.
- Ran a security audit of the platform and opened seven fix PRs across auth, CI, and the CLI.
- 152 merged PRs across the platform and its open-source SDKs.

Independent Software Engineer
2024 - 2026

Independent contractor, San Francisco

- Shipped autonomous AI agent systems end to end for clients, including a deal-analysis platform in production at a private credit firm and a lead pipeline for a real-estate cash buyer.

Founder & President, Boffy LLC
2019 - Present

Media brand with 2.1M subscribers and 270M+ views on YouTube

- Grew the channel from zero; wrote and presented all 136 long-form videos on camera.
- Negotiated and delivered brand partnerships with RedMagic, Wargaming, GeoGuessr, and others.
- Hired and directed a team of 3, and ran a branded e-commerce store and a commercial Minecraft server.

PROJECTS

- **memo engine**: reads a deal's documents and writes the credit memo, every claim cited to its source page; in production at a private credit firm.
- **claim wright**: insurance claim adjudication; Claude reads the claim file and a deterministic engine computes the payout. 91% of decisions within $250 of the human adjudicator, median error $0.
- **autohack**: an autonomous bug-hunter that watches seven bounty platforms, checks its own findings with an adversarial second model, and drafts reports behind a human approval gate.
- **herdr layout**: my daily cockpit for nine parallel Claude Code sessions; a Rust terminal-UI fork rebuilt around a boxed-tab sidebar, live action lines, and a native detail panel.
- **survival station**: an air-gapped, solar-powered AI computer: local models and an 85 GB offline library, including all of English Wikipedia.
- **pinch**: Claude Code driven from an Apple Watch over cellular: dictate a prompt, pinch to send, roll the crown to approve diffs.
- **deskfly**: a fly that lives on my desktop, run by the real FlyWire connectome: 139,255 neurons and 3.87M connections simulated live.

SKILLS

- **AI / LLM:** Anthropic SDK (API + Claude Agent SDK), OpenAI SDK, Gemini, Groq, OpenRouter, tool_use / function calling, prompt caching, multi-provider routing, agentic RAG
- **Model Training:** LoRA fine-tunes for local LLMs and image models, retuning and abliterating open-weight models, local inference with Ollama
- **Languages & Frameworks:** TypeScript, Python, JavaScript, Swift (watchOS), Next.js 16, React 19, FastAPI, tRPC, Node.js, Electron, Three.js, Tailwind CSS
- **Data, Testing & Tooling:** PostgreSQL, SQLite, pgvector, Drizzle ORM, Zod, Pydantic, Playwright, Vitest, pytest, Claude Code, Git
