AI engineer and developer advocate. I build autonomous AI agents from scratch with direct SDK calls, no frameworks like LangChain. I also grew a YouTube channel to 2.1M subscribers and 270M views, so I can ship production LLM systems and explain them in a way developers actually want to watch and read.

PROJECTS

- **memo-engine** (private, NDA): AI deal analysis and investment memo platform for a private credit investment firm. Ingests messy deal documents (PDFs, Excel models, .msg Outlook emails), runs **contextual retrieval** over pgvector with per-chunk Sonnet prefixes cached via **ephemeral prompt caching**, produces institutional-grade memos with **every claim cited back to source**. Durable pipeline orchestration via **Vercel Workflow DevKit**, forced tool_use + Zod for ~40-field structured extraction. Next.js 16, Neon Postgres, Anthropic SDK, Voyage AI.
- **autohack**: Autonomous vulnerability hunter across HackerOne, Immunefi, Huntr, Bugcrowd, and Intigriti. **12-state findings pipeline** with 60-minute hunts, **adversarial self-review** filters false positives before submission, cross-hunt memory records outcomes for learning. TypeScript monorepo, SQLite + Drizzle, PTY-based Claude spawning, tRPC.
- **property-leads** (private client): Autonomous lead-finding pipeline for a real-estate cash buyer. **4-agent chain** on hourly Vercel cron: Haiku orchestrator, Sonnet research and scoring, Sonnet writer gated by a Haiku reviewer. Resend outreach at **\$0.22 per 33-property run**. Next.js 16, Neon Postgres, Anthropic SDK.

EXPERIENCE

Independent AI Engineer

2024 - Present

Self-employed, San Francisco

- Ship autonomous AI agent systems end to end. Direct SDK calls over framework abstractions. State machines for entity lifecycles. Learning loops that record outcomes and feed them back into future runs.
- Build multi-provider LLM orchestration: Anthropic API and Claude Agent SDK, OpenAI SDK, Groq, OpenRouter, with fallback routing, prompt caching on stable system prompts, and tool_use / function calling for structured output.
- Document these builds on a portfolio site and translate production patterns like forced tool_use and prompt caching into plain explanations. Work daily in Claude Code as the primary development tool.

Founder & Content Creator, YouTube (Boffy)

2019 - Present

Independent digital media brand, 2.1M subscribers, 270M+ lifetime views

- Grew a channel from zero to 2.1M subscribers and 270M+ views across 136 long-form videos, mostly gaming.
- Wrote and presented every video on camera, including explainers that broke difficult technical processes down for a mass audience, like game modding and how graphics cards affect game performance.
- Negotiated brand partnerships with **RedMagic**, **Wargaming**, **GeoGuessr**, **YouTooz**, **Factor**, and others. Represented products on camera and delivered scripted integrations on deadline.
- Hired and directed a team of 3 through the full content lifecycle, and ran a branded e-commerce store and a commercial Minecraft server.

SKILLS

- **AI / LLM**: Anthropic SDK (API + Claude Agent SDK), OpenAI SDK, Gemini, Groq, OpenRouter, Ollama, tool_use / function calling, prompt caching, multi-provider routing, agentic RAG
- **Languages & Frameworks**: TypeScript, Python, JavaScript, Next.js 16, React 19, FastAPI, tRPC, Node.js, Tailwind CSS
- **Data, Testing & Tooling**: PostgreSQL, SQLite, pgvector, Drizzle ORM, Zod, Pydantic, Playwright, Vitest, pytest, Claude Code, Git
- **Developer Relations & Content**: On-camera presentation and video production, audience growth from zero to 2.1M, scriptwriting and project documentation, community engagement, brand and partner relationships
